1. Introduction

1.1 Purpose

The purpose of the Security Incident Mapping (SIM) system is to provide students, staff, and landlords with a simple web-based platform for reporting security incidents on and around campus. The system helps improve communication between users and security personnel by enabling quick and organized incident reporting.

1.2 Scope

SIM is a web application that allows users to report security incidents such as theft, assault, rape, stabbing, and burglary. The system also enables an administrator to view, manage, and update reported incidents.

1.3 Objectives

- Improve campus security reporting.
 - Encourage quick reporting of incidents.
 - Maintain a record of reported incidents.
 - Help security personnel respond efficiently.
-

2. System Overview

The SIM system provides a simple interface where users can submit incident reports. The reports are stored and can be viewed and managed by an administrator.

3. Functional Requirements

The system shall:

- Allow users to report security incidents.
 - Allow users to view reported incidents.
 - Allow users to submit reports anonymously.
 - Allow administrators to log in.
 - Allow administrators to manage reports.
 - Allow administrators to delete reports.
 - Allow administrators to update report status.
-

4. Non-Functional Requirements

- The system should be easy to use.
 - The system should respond quickly.
 - The system should be secure.
 - The system should be reliable.
 - The interface should be mobile-friendly.
-

5. Users of the System

- Student
 - Staff
 - Landlord/Landlady
 - Administrator
-

6. System Components

- Home Page
 - Report Incident Page
 - View Reports Page
 - Admin Login
 - Reports Management
-

7. Conclusion

The SIM system provides a simple and effective solution for reporting security incidents on campus. It supports faster communication between the campus community and administrators, helping improve campus safety.
